## Initial Model Training Code, Model Validation and Evaluation Report

The initial model training code will be showcased in the future through a screenshot. The model validation and evaluation report will include classification reports, accuracy, and confusion matrices for multiple models, presented through respective screenshots.

## **Initial Model Training Code:**

```
Random Forest

[28] from sklearn.ensemble import RandomForestClassifier

[29] rf=RandomForestClassifier()
    rf.fit(x_train_smote,y_train_smote)

**RandomForestClassifier
RandomForestClassifier()

Accuracry Score of Random Forest

**Description*

**Predict(x_train_smote)

**Pred=rf.predict(x_test)
    print("accuracy score")
    print("accuracy score")
    print(accuracy_score(y_test,pred))
    print("confusion matrix")
    print(classification_report(y_test,pred))
    print(confusion_matrix(y_test,pred))
```

```
Decision Tree

[32] from sklearn.tree import DecisionTreeClassifier

dt=DecisionTreeClassifier()
   dt.fit(x_train_smote,y_train_smote)
   pred=dt.predict(x_test)
   print("accuracy score")
   print(accuracy_score(y_test,pred))
   print("\n")
   print("confusion matrix")
   print(classification_report(y_test,pred))
```

```
Logistic Regression

[35] from sklearn.linear_model import LogisticRegression

[36] lr=LogisticRegression()
    lr.fit(x_train_smote,y_train_smote)
    pred=lr.predict(x_test)
    print("accuracy score")
    print(accuracy_score(y_test,pred))
    print("\n")
    print("confusion matrix")
```

```
[38] from sklearn.neighbors import KNeighborsClassifier
```

k-Nearest Neighbors

```
knn=KNeighborsClassifier(n_neighbors=5)
knn.fit(x_train_smote,y_train_smote)
pred=knn.predict(x_test)
print("accuracy score")
print(accuracy_score(y_test,pred))
print("\n")
print("confusion matrix")
print(classification_report(y_test,pred))
```

## Model Validation and Evaluation Report:

Model	Classification Report/ Confusion Matrix						F1
